AMEYA SANJAY BHAGAT

+91 70399 24401 — ameyabhagatwork@gmail.com — LinkedIn — GitHub — Kaggle

OBJECTIVE

MCA student with hands-on experience in Python, SQL, full-stack development, AI-powered applications, and database-driven systems through academic projects and industry experience. Experienced in building APIs and data-driven applications to solve practical problems. Interested in combining technical skills, data analysis, and business understanding to develop useful digital solutions, improve workflows, and support informed decision-making.

EDUCATION

Master of Computer Applications (MCA), BVIMIT Navi Mumbai Jul 2025 – Present — **CGPA: 8.6/10**
Relevant Coursework: Advanced Java, Advanced DBMS, Artificial Intelligence and Machine Learning, Natural Language Processing, Information Security, Cyber Security, DevOps, Advanced Web Technologies, Cloud Computing, Software Testing and Quality Assurance, Big Data Analytics

Bachelor of Science (Computer Science), SIES College, Nerul Aug 2020 – Jul 2023 — **CGPA: 9.69/10**
Relevant Coursework: Data Science, Ethical Hacking, Cloud Computing, Information Retrieval, Artificial Intelligence, Software Testing and QA, Web Services, DBMS.

Higher Secondary Certificate (HSC), St. John the Baptist High School and Jr College, Thane **2018 - 2020**
Maharashtra State Board — First Class

Secondary School Certificate (SSC), St. John the Baptist High School and Jr College, Thane **2018**
Maharashtra State Board — Distinction

TECHNICAL SKILLS

Programming:	Python, Java, SQL
BI & Visualization:	Power BI, Data Visualization, Interactive Dashboards, Data Analysis (EDA)
Generative & Agentic AI:	Agentic AI Workflows, LLM Tool Calling, RAG Pipelines, Prompt Engineering
AI & Machine Learning:	Machine Learning, Natural Language Processing, Sentence-Transformers, Data Pipelines
Databases:	PostgreSQL, Supabase, MongoDB, Relational Data Modeling, DBMS
Web Development:	React.js, Next.js, REST APIs
Software Engineering:	Software Testing, API Testing, BRD & FRD, Security (RLS, JWT)
CMS & Automation:	Odoo CMS, Zapier, Snov.io
Tools & Platforms:	Git, GitHub, Postman, Docker, Vercel, Microsoft Office (Excel)

EXPERIENCE

Digital Solution Intern, CHESS Feb 2024 – Feb 2025
Thane, Maharashtra

- Built and updated the company website using Odoo CMS, adding and organizing service pages, company information, and other website content.
- Created the company's digital profile and structured information about its services to support client communication and online presentation.
- Created and managed content for LinkedIn, Instagram, and Facebook, including posts about company services, projects, and success stories.
- Used digital automation tools to simplify parts of the content and engagement workflow across social media platforms.

KEY PROJECTS

ASTRA: Automated Risk Stratification for AI-Authored Pull Requests *Python, FastAPI, Tree-sitter, XGBoost, SHAP, Sentence-Transformers, SQLAlchemy*

- Architected an end-to-end triage microservice that intercepts AI agent PRs (e.g. Codex, Copilot) via FastAPI webhooks to predict defect risk before human review.
- Engineered a 28-dimensional feature extraction pipeline combining Tree-sitter AST structural delta metrics (F01–F12), MiniLM semantic intent-diff alignment (F13–F18), and PR process provenance (F19–F28).
- Extracted syntax-aware structural churn and McCabe cyclomatic complexity shifts using an error-tolerant Tree-sitter parser, avoiding the blind spots of plain text line diffs.
- Trained a Platt-calibrated XGBoost classifier producing stratified risk scores (Low, Medium, High) alongside TreeSHAP local feature attribution to justify each risk tier.
- Built an asynchronous SQLAlchemy pipeline with HMAC-verified GitHub webhooks that automatically posts markdown risk assessments and SHAP factor breakdowns directly to PR threads.

Maestro Career - Career Assessment Platform (Live Project) *Next.js 14, TypeScript, Supabase, Razorpay, Puppeteer*

- Built a career assessment platform that provides psychometric assessments, personalized learning paths, paid plans, and downloadable career reports.
- Integrated Razorpay for paid assessments by creating orders on the server, verifying payment signatures, and updating access in Supabase.
- Generated personalized career reports as PDF files using Puppeteer and headless Chromium for users and administrators.
- Built an admin dashboard for managing users, assessment access, check-ins, analytics, and data exports using Supabase and PostgreSQL.
- Tested key user flows and maintained build, lint, and deployment checks to catch issues before releases.

Manthan 2026 - Full-Stack Tech Fest Website *Next.js 14, TypeScript, Supabase, Razorpay, Tailwind CSS*

- Built and deployed the official tech fest website for event registration, online payments, and digital pass delivery, supporting **110 registrations** and **Rs. 24,310** in recorded revenue.
- Integrated Razorpay for online payments and implemented QR-based digital passes with server-side validation.
- Developed an admin dashboard to track registrations, payments, check-ins, cash collections, and event analytics, with **86 check-ins** recorded through the platform.
- Used Supabase and PostgreSQL with Row Level Security (RLS) to manage registration data and control access to administrative features.

QueueCure - Real-Time Clinic Queue & Digital Triage *React, TypeScript, Supabase Realtime, PostgreSQL RPC*

- Built a real-time clinic queue system for patient registration, priority triage, and queue tracking across Reception, Patient Self-Check-in Kiosk, Waiting Room TV, and Doctor Cockpit.
- Implemented priority-based emergency handling using PostgreSQL RPC functions to prevent duplicate tokens and conflicting queue updates when multiple users update the queue at the same time.
- Built a wait-time estimation system using previous consultation times to calculate expected waiting time for patients.
- Used Supabase Realtime and TanStack Query to update queue status across multiple devices without requiring users to refresh the page.

Keepsake - AI-Powered Career Intelligence Platform *React 19, TypeScript, Groq Llama-3, Supabase, pgvector*

- Built an AI-powered career platform that processes resumes, certificates, and other career documents to create searchable career timelines and knowledge graphs.
- Built a document processing pipeline using pdfjs, Mammoth, and Groq Llama models to extract text, entities, and useful information from uploaded documents.
- Implemented semantic search using Google Gemini embeddings and PostgreSQL pgvector to find relevant information across multiple career documents.
- Secured user data using Supabase Row Level Security (RLS), database triggers, and separate storage buckets, with TanStack Query used for client-side data fetching and caching.

CERTIFICATIONS

- FutureSkills Prime – **Generative AI Fluency (Gold, 100%)**, IT-ITeS Sector Skills Council/NASSCOM, 2026
- NPTEL Certification – **Cloud Computing (Elite Silver)**, IIT Kharagpur (SWAYAM/NPTEL), 2026
- FutureSkills Prime – **Exploratory Data Analysis**, IT-ITeS Sector Skills Council/NASSCOM, 2026
- NPTEL Certification – **Blockchain and its Applications**, IIT Kharagpur (SWAYAM/NPTEL), 2026

HACKATHONS

MemoryVerse AI '26 - Wooble *Online AI Hackathon — July 2026*

- Developed and submitted an AI-powered career memory platform that organizes resumes, certificates, and other career documents into a searchable knowledge base with semantic search and automated career insights.

QueueCure '26 - Wooble *Online Hackathon — July 2026*

- Developed and submitted a real-time clinic queue management platform with priority-based triage, wait-time estimation, and synchronized dashboards using React and Supabase.

ACHIEVEMENTS

- Received a Letter of Appreciation from SIES College, Nerul for conducting a project guidance session for Computer Science students on project ideation, technology selection, development practices, and real-world implementation.
